Program 3 Documentation

in igloo score 1, there were 3 test cases added all together
        one with s1 less than s2
        one with s3 and s being compared
        one with less arguments
        one with double values.
-this triggered all of the lines of code

in igloo score 3, I needed to alter two of the if statements that were redundant inside of the java file to make the inputs branch to certain cases.
-Added multiple cases to trigger each statements
- 3 cases where each of the argument was the lowest value
- a less than 3 arg statements
- a statement with doubles as args
- 6 statements where each statement is less than 0 or greater than 50
